Education

Army Institute of Technology CGPA-8.9
BE in Computer Science *OCT.2022 - OCT.2026*

Technical Skills

Languages: C++, Javascript, HTML, CSS, Dart
Technologies: ReactJs, NodeJs, Flutter, Firebase , Vite, Bootstrap, Git, Github, VS Code
Databases: MongoDB, Firebase, MySQL
Coursework: OOPS, Data Structures and Algorithms, Database Management System(DBMS), Operating System

Experience

01. Cyber Peace Foundation Jul.2024 - Aug.2024
Web Development Intern

- Developed and optimized responsive web applications using ReactJS and Bootstrap, significantly improving load times and ensuring compatibility across various device types and screen sizes.
- Implemented multiple dynamic UI components with ReactJS, enhancing user engagement and reducing development time with Vite's faster build processes.

02. MyPaaltu Petcare Oct.2024 - Jan.2025
Fullstack Intern (Flutter and Web Development)

- Developed an intuitive and highly responsive UI using Flutter for mobile app and ReactJs for Web application, enhancing user engagement and application usability.
- Engineered a robust backend infrastructure with Node.js, ensuring efficient data management and seamless API integration.
- Orchestrated the end-to-end integration of UI and backend systems, delivering a fully functional and high-performing application.

Projects

01. MyPaaltu Website | *MongoDB, Express, ReactJs, NodeJs* Link

- Developed a Full-Stack Web Application for MyPaaltu using the MERN stack **(MongoDB, Express.js, React.js, Node.js)**, enabling seamless user real-time interactions.
- Engineered and **integrated RESTful APIs** on the backend using Express.js and Node.js, ensuring secure data handling, efficient communication between client and server, and scalable database management with MongoDB..
- Designed a **Responsive, Dynamic Frontend with React.js**, implementing reusable components and intuitive UI/UX design optimized for both desktop and mobile platforms.

02. Financial Tracker App - FinPro | *Flutter,Firebase,Dart* Link

- Developed a cross-platform financial tracker app using Flutter, integrating **Firebase** for secure authentication and **SharedPreferences** for offline local storage of transactions.
- Implemented robust transaction management features, enabling users to log in, sign up, and perform **CRUD operations** (add, delete) on categorized income and expense records through a highly intuitive UI.
- Designed **dynamic data visualizations**, employing **doughnut and bar charts** to provide clear, interactive representations of income and expenses, enhancing user financial insights.

Achievements

- **UBS Campus Hackathon Finalist** Link
  Selected as a finalist in the prestigious UBS Campus Hackathon for innovative problem-solving and technical skills.

- Secured a rating of **1202 (Pupil)** on Codeforces Link
  Solved **500+** problems on platforms like **GeeksforGeeks, Codeforces, CodeChef, and LeetCode.**
